OLEKSANDR NISKOV

Technical Generalist - AI, Automation & Project Execution
Jaen, Spain | +34 613 675 701 | oleksandr.niskov@gmail.com | LinkedIn: www.linkedin.com/in/radnere

SUMMARY

Technical generalist with hands-on experience across AI/XR prototyping, delivery coordination, structured documentation, and operational process improvement. Combines a Computer Science background in Artificial Intelligence with current MSc studies in IT Project Management. Strong at turning ambiguity into structure, aligning people around execution, and moving ideas from concept to usable, testable outcomes.

FOCUS AREAS

AI & LLM Workflows - Generative AI tooling, prompt design, NLP experimentation, AI-assisted research, content systems, and model-enabled product thinking.

Automation & Systems - Notion-based workflows, multi-agent process design, API-oriented thinking, workflow structuring, and operational simplification.

Project & Product Execution - Cross-functional coordination, planning cadence, meeting notes, follow-ups, checklists, stakeholder communication, and delivery visibility.

KEY ACHIEVEMENTS

- Coordinated weekly execution cadence for an approximately 15-person XR/MR startup team, keeping cross-functional work visible through agendas, notes, decisions, owners, and follow-ups.
- Prepared 5-6 partner- and investor-facing decks and briefs, supporting external communication with structured materials and consistent version control.
- Built an inventory tracking and audit workflow for 3 retail locations in Excel and Access, improving visibility and repeatability for heavy stocktakes lasting 2-3 days per store.

EXPERIENCE

AI Specialist & Project / Operations Assistant | LocuZoom, Madrid, Spain (Hybrid, Part-time) | Dec 2022 - Aug 2024

- Coordinated weekly team check-ins and asynchronous follow-ups so tasks did not stall between meetings.
- Maintained lightweight delivery planning in Microsoft Project and task tracking in Microsoft To Do across XR, design, finance, and operations workstreams.
- Built structured documentation in Google Drive and Docs, including requirements notes, checklists, handovers, testing notes, and troubleshooting guidance.
- Prepared external-facing PowerPoint materials for partners and investors, keeping messaging and file versions aligned.
- Supported a Meta Quest 3 prototype in Unity, including on-device speech recognition integration with Vosk and practical setup/testing documentation.

Retail Operations & Digital Payments Project Assistant | Private Retail Network, Kharkiv, Ukraine (Part-time) | Jan 2019 - Jan 2022

- Built an inventory tracking and audit system in Excel and Access for recurring stocktakes across 3 store locations.
- Implemented a QR-based receiving and labeling workflow that reduced manual typing and improved consistency during intake.
- Wrote simple SOPs and checklists for receiving, audits, and handovers so routine work was handled in a repeatable way.
- Supported readiness planning for a 5-terminal contactless payments rollout, including option research, setup preparation, and coordination before the rollout paused in early 2022.

SELECTED PROJECTS

Notion Multi-Agent Content Workflow | Self-directed, In Progress | 2026

- Designing a Radar - Analyst - Builder workflow that collects signals, structures insights, drafts content, and loads it into a working database for publishing flows.
- Using Notion as an operational base for content pipelines, structured knowledge capture, and AI-assisted editing.

PM Toolkit in Notion | Self-directed, In Progress | 2026

- Building reusable templates for project charter, scope, WBS, RACI, RAID log, governance, status reporting, and change tracking.
- Focused on fast setup for small teams that need clarity, repeatability, and better execution discipline.

NLP Comment Classification | Academic Project, Universidad de Jaen | 2023

- Built a Spanish-language NLP workflow for classifying harmful vs non-harmful comments with attention to context rather than simple trigger words.
- Worked with training data and model-based text classification concepts to distinguish meaning across different uses of the same words.

XR / Voice Interaction Thesis Work | Bachelor's Thesis Context | 2024

- Bachelor's thesis focused on software for interactive quests with augmented and virtual reality elements and the use of voice-speech technologies.

EDUCATION

MSc, Information Technology Project Management | Kharkiv National University of Radio Electronics | Sep 2024 - Present

- Research focus: lifecycle governance and rollout models for contactless payment infrastructure in urban transport systems.
- Grade reported on current profile: 95/100.

Erasmus+ Exchange Program, Computer Science | Universidad de Jaen, Spain | Jan 2023 - Jan 2024

- Studied in an international academic environment, worked across technical assignments, and strengthened independent adaptation in Spain.

BSc, Computer Science (Artificial Intelligence track) | Kharkiv National University of Radio Electronics | Sep 2020 - Jul 2024

- Completed a 240 ECTS program in Computer Science with an Artificial Intelligence specialization and strong AI/ML-related coursework.
- Relevant foundation included Python, Machine Learning, Artificial Neural Networks, Intelligent Natural Language Processing Systems, Data Mining, and System Analysis.

TOOLS & STRENGTHS

Core tools - Notion, ChatGPT, Gemini, Perplexity, Google Workspace, Microsoft Project, Microsoft To Do, Excel, PowerPoint, Unity, Meta Quest 3, Vosk, WhatsApp.

Working familiarity - Jira, Confluence, Docker, API-based workflows, Cursor, Photoshop, DaVinci Resolve, basic website creation.

Best-fit roles - AI Operations, Automation Support, Junior Technical PM, Project Coordinator, Product Operations.

LANGUAGES & WORK AUTHORIZATION

Languages & authorization - English (C1), Ukrainian (native), Russian (native), Spanish (A2). Spain (TIE) and valid Canadian work permit through 04 Mar 2027. Available immediately.
